Submitted (24-FBB) 1999) P.falciparum Genome Sequencing Consortium, The Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge (B10 18A, UK)
On Aug 12, 1999 this sequence version replaced gi:5531400.
For more information about this sequence or the Malaria Project, see http://www.sanger.ac.uk/Projects/P_falciparum. IMPORANT: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 (bases 1 to 224448)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TRED927/4 GUTat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Genome Sequencing A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerlectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (qi|4732114|qi|ah129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the linsert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ē

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the isolation of the Arabidopsis thaliana MSH3 (AAX79066) and MSH6 (AAX79067) genes. These genes are MutS homologues (MSH) from plants and are involved in DNA mismatch repair. The DNA sequence can be used in processes for at least partially inactivating a DNA mismatch repair system of a plant, for increasing genetic variation in a plant, and for obtaining a plant with a desired characteristic. Primers AAX79105-X79160 represent 28 primer pairs used to amplify short allelic repeat fragments designated Simple Sequence Length Polymorphisms (SSLP). These fragments can be used as markers in the analysis of homologous recombination between genomes of A.thaliana subspecies.
                                                         The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. The present sequence represents the pea pra2 promoter core region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MSH6; MutS homologue; plant; DNA mismatch repair; genetic variation; characteristic; microsatellite; primer; PCR; amplification; SSLP; ss; simple sequence length polymorphism.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      coding region encoding a product active on an essential bacterial target. The method comprises identifying a nucleic acid sequence encoding a gene product that provides a bacteria-inhibiting function when an uncharacterised bacteriophage infects a pathogenic bacterium. The compound active on a target of a bacteriophage inhibitor protein in a bacteria is used to treat or prevent a bacterial infection in an animal AAA68243 to AAA68442 and AABI6533 to AABI6554 represent bacteriophage nucleotide and protein sequences which are used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for identifying a bacteriophage

and plant tissues comprising the expression cassette. The expression cassette of the invention can be used to generate transgenic plants in which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97411-A97412 represent oligonucleotides used in an exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pea wild-type pra2 gene light-repressible promoter oligonucleotide, WT2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New DNA fragment or promoter for expressing a target gene, specifically under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage -
Pea wild-type pra2 gene light-repressible promoter oligonucleotide, WT1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

The invention also relates to an expression cassette containing the praz promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97393-A97398 represent PCR primers used in an exemplification of the invention
                                                                                                                                                                                                                                Pea pra2 light-repressible promoter mutant LS1 PCR primer, SEQ ID NO:11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New DNA fragment or promoter for expressing a target gene, specifically under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage -

                                                                                                                                                                                     The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression expression cassette of the invention can be used to generate transgenic plants in which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97411-A97412 represent oligonucleotides used in an exemplification of the invention to generate a wild-type pea pra2 promoter fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New DNA fragment or promoter for expressing a target gene, specifically

The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression cassette of the invention can be used to generate transgenic plants in which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. The present sequence represents a wild-type pea pra2 promoter fragment (bases -672 to -642 of the pra2 gene) which comprises the pra2 promoter core region (AAA97383).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New DNA fragment or promoter for expressing a target gene, specifically under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
to improve quality and prevent deterioration during storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

and plant tissues comprising the expression cassette. The expression cassette of the invention can be used to generate transgenic plants in which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97424-A97429 represent mutant pea praz promoter fragments (corresponding to bases -672 to -642 of the gene) which comprise the praz promoter core region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97344), from the gene encoding the pea GTP-binding protein praz. The invention also relates to an expression cassette containing the praz promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97444.497429 represent mutant pea praz promoter fragments (corresponding to bases -672 to -642 of the gene) which comprise the praz promoter core region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New DNA fragment or promoter for expressing a target gene, specifically under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant issues comprising the expression cassette. The expression cassette of the invention can be used to generate transgenic plants in which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97424.A9742 represent mutant pea pra2 promoter fragments (corresponding to bases)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New DNA fragment or promoter for expressing a target gene, specifically under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          672 to -642 of the gene) which comprise the pra2 promoter core region.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the identification of nucleic acid molecules (AAI29513-AAI31314) from the human genome which include polymorphic sites which can predispose individuals to disease. Various genes from a number of individuals were resequenced and single nucleotide polymorphisms (SNPs) in these genes discovered. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype. The nucleic acids containing the polymorphic sites may be useful in forensics and paternity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pea pra2 light-repressible promoter clone PL4C PCR primer, SEQ ID NO:21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid molecules from the human genome which include polymorphic sites, useful in methods for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. diabetes) associated with a particular genotype -

The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression eassette of the invention can be used to generate transgenic plants in which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97387-A97392 and AAA97398-A97410 represent PCR primers used in an exemplification of the invention to amplify the pea pra2 promoter for cloning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pea pra2 light-repressible promoter mutant LS4 PCR primer, SEQ ID NO:14.
                                                                                                                                                                                                                                                                                                                                                                                                     New DNA fragment or promoter for expressing a target gene, specifically under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pead graph pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97393-A97398 represent PCR primers used in an exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                      New DNA fragment or promoter for expressing a target gene, specifically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pea pra2 light-repressible promoter mutant LS5 PCR primer, SEQ ID NO:15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New DNA fragment or promoter for expressing a target gene, specifically under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage -
                                                                                                                                                                                                                                                                                                                                                                                                                 under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                           The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression cassette of the invention can be used to generate transgenic plants in which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97391-A97398 represent PCR primers used in an exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a light-repressible promoter (AAA97385), or active fragments thereof (AAA97383, AAA97384), from the gene encoding the pea GTP-binding protein pra2. The invention also relates to an expression cassette containing the pra2 promoter or its active fragments for the expression of a gene under photoinhibitory or dark conditions in a plant, and to transgenic plants, their descendants and plant tissues comprising the expression cassette. The expression cassette of the invention can be used to generate transgenic plants in which deterioration during storage in the dark is prevented. This is particularly useful for agricultural products. Sequences AAA97417-A97418
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pea wild-type pra2 gene light-repressible promoter oligonucleotide, WT4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New DNA fragment or promoter for expressing a target gene, specifically under photoinhibitory conditions, and for transforming a plant cell or plant to improve quality and prevent deterioration during storage -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with nis sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempte was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the

During sequence assembly data is compared gi:13274323.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; WP:, WORMPEP; Information on the WORMPEP database can be found at the world at the world
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IMPORTANT: This sequence is not the entire insert of clone RP11-48719 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true left end of clone RP11-21282 is at 13292 in this sequence. The true right end of clone RP11-274M8 is at 100 in this
AL161624 133021 bp DNA PRI 18-MAY-2001
Human DNA sequence from clone RP11-48719 on chromosome X, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.sanger.ac.uk/HGP/ChrX
RP11-48719 is from the library RPCI-11.2 constructed by the group
of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens

It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 25 contigs. The true corder of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                           will be sequenced to completion. In the event that the record is updated, the accession number will
and the order in which they appear is completely
